

Seamless Integration with Other Applications

With the Argos API advanced feature, you can leverage your existing third-party software products. An API (Application Programming Interface) allows applications on different platforms, or written in different languages, to interoperate quickly and easily.

The Argos API allows reports to be run and then securely delivered via third-party software tools such as web portals or ERP software. Through the API, Argos reports can be accessed anytime from anywhere, promoting broader use and availability of reporting across all user groups.

Technical Information

- Utilizes standard HTML links.
- Leverages Single-Sign-On (LDAP) servers for authentication and security for users and for groups. Uses AES and HTTPS encryption to protect sensitive data.
- Your integration team has the flexibility to set up the interface between Argos and the third-party application to be either automatic or interactive.
 - Automatic mode – The third-party application can automatically request that a report be generated and delivered to the requesting application.
 - Interactive mode – A user in the third-party application can request to run a single report or dashboard, just as if they were logged into Argos.
- Argos API is a web-based interface that uses HTTP, HTTPS or TCP/IP. Administrators can enable an object for use via the API. Argos generates the sample GET or POST method (which can be further customized). Programmers have flexibility in calling Argos reports from existing applications through simple command line calls (maprapi). Maprapi is an ANSI-C standalone application.

Benefits of the Argos API

- **Increase your software's return on investment** by seamlessly integrating Argos with other software products that can execute an API call.
- Securely launch Argos reports, OLAP Cubes and Dashboards **from any web page or portal** (including Banner Self-Service and Luminis).
- **Access reports in your third-party software of choice** without creating Argos accounts or needing prior knowledge of Argos.
- **Schedule Argos jobs and reports with third-party products**, including UC4 Scheduling, Banner-Job-Submission and Appworx Scheduling.
- Fast implementation, easy to use.
