

## Centralize Your Inbound & Outbound Data

The Connect advanced feature for Argos gives you one solution to improve management of, and reporting from, your inbound and outbound data. In today's technological landscape, it's not unusual for institutions to pull data in from, and send data out to, numerous systems – some on-premise and some in the cloud. Now, you have one way to manage all that. Argos Connect has two components: Cloud Connect and the DataBlock Connector.

### Cloud Connect

Cloud Connect allows institutions to pull data out of a cloud source and send it directly into Argos. Rather than simply capturing a snapshot of data at a particular time, Cloud Connect enables institutions to create an ongoing connection from one or multiple cloud sources and feed that data into an Argos report. That data can also be joined by data pulled in from on-premise sources.

#### Benefits

- Expands reporting reach to cloud-based systems
- Allows institutions to move from on-premise to SaaS-based systems without having to worry about the effect on reporting
- Opens up new avenues of data access while centralizing reporting output
- Allows for broader institutional insights

### DataBlock Connector

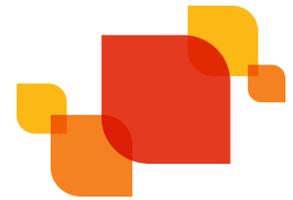

The DataBlock Connector provides institutions with the ability to send data directly from an Argos DataBlock to supplemental front-end reporting/BI tools. This increases data reliability and allows for a more automated flow of information within the institution's preferred data ecosystem, enabling quicker, better-informed decisions.

#### Benefits

- Improves how institutions use supplemental front-end reporting/BI tools directly with Argos, saving themselves more time
- Ability to apply the same visualizations to operational reporting as are applied to strategic reporting
- Allows colleges and universities to maintain a single source of truth for reporting data, by connecting to a known, trusted data source
- Connect to other JSON-friendly applications beyond reporting and business intelligence

#### Overall Benefits

- One method for **managing data flow** from all relevant sources
- Regardless of what systems you're connecting to, the report building process in Argos will **remain the same**
- **Eliminates manual processes** (e.g., exporting and importing of CSV files) and the need for additional development
- Connections are based on a RESTful API and connect using a **flexible and scalable** integration standard

## How Does Argos Connect work?

### About Argos

Evisions Argos delivers the insights you need quickly, in order to make timely, better-informed decisions. It helps colleges and universities work better because it delivers flexible, powerful, easy-to-use reporting tools developed by higher education experts. Argos provides accurate information and data when you need it, through reporting made simple. For more information, please visit [www.evisions.com/argos](http://www.evisions.com/argos).

### About Evisions

Evisions helps higher education organizations work better. Our software eases your administrative load—so you can get back to the process of learning and discovery. Built and optimized for administrators, our solutions help you stay on top of your many tasks and responsibilities, reduce hassle and waste, and work more efficiently.
